We Are Living in an Emergency That Requires Urgent Action (a note written with Noam Chomsky): The First Newsletter (2021)

Dear friends,

Greetings from the desk of the Tricontinental: Institute for Social Research.

The first newsletter of the new year is written in collaboration with our friend, the great linguist and prophetic voice, Noam Chomsky. What follows is a statement by Noam and me.

Three Major Threats to Life on Earth That We Must Address in 2021: A Note from Noam Chomsky and Vijay Prashad

Large parts of the world – outside of China and a few other countries – face a runaway virus, which has not been stopped because of criminal incompetence by governments. That these governments in wealthy countries
cynically set aside the basic scientific protocols released by the World Health Organisation and by scientific organisations reveals their malicious practice. Anything less than focusing attention to managing the virus by testing, contact tracing, and isolation – and if this does not suffice, then imposing a temporary lockdown – is foolhardy. It is equally distressing that these richer countries have pursued a policy of ‘vaccine nationalism’ by stockpiling vaccine candidates rather than a policy for the creation of a ‘people’s vaccine’. For the sake of humanity, it would be prudent to suspend intellectual property rules and develop a procedure to create universal vaccines for all people.

Although the pandemic is the principal issue on all of our minds, other major issues threaten the longevity of our species and of our planet. These include:

**Nuclear annihilation.** In January 2020, the *Bulletin of the Atomic Scientists* set the 2020 Doomsday Clock to 100 seconds to midnight, too close for comfort. The clock, created two years after the first atomic weapons were developed in 1945, is evaluated annually by the Bulletin’s Science and Security Board in consultation with its Board of Sponsors, who decide whether to move the minute hand or keep it in place. By the time they set the clock again, it may well be closer to annihilation. Already limited arms control treaties are being
shredded as the major powers sit on close to 13,500 nuclear weapons (more than 90% of which are held by Russia and the United States alone). The yield of these weapons could easily make this planet even more uninhabitable. The United States navy has already deployed low-yield tactical W76-2 nuclear warheads. Immediate moves toward nuclear disarmament must be forced onto the world’s agenda. Hiroshima Day, commemorated each year on 6 August, must become a more robust day of contemplation and protest.

Aline Amaru (Tahiti), La Famille Pomare, 1991.

**Climate catastrophe.** A scientific paper published in 2018 came with a startling headline: ‘Most atolls will be uninhabitable by the mid-21st century because of sea-level rise exacerbating wave-driven flooding’. The authors found that atolls from Seychelles to the Marshall Islands are liable to vanish. A 2019 UN report estimated that a million animal and plant species are threatened with extinction. Add to this the catastrophic wildfires and the severe bleaching of the coral reefs and it is clear that we no longer need to linger over clichés about one thing or another being a canary in the coalmine of climate catastrophe; the danger is not in the future, but in the present. It is essential for major powers – who utterly fail to shift from fossil fuels – to commit to the ‘common but differentiated responsibilities’ approach of the 1992 Rio Declaration on Environment and Development. It is telling that countries such as Jamaica and Mongolia updated their climate plans to the United Nations before the end of 2020 – as mandated by the Paris Agreement – even though these countries produce a tiny fraction of global carbon emissions. The funds that were committed to developing countries for their participation in the process have virtually dried up while external debt has ballooned. This shows a lack of basic seriousness from the ‘international community’.
Neoliberal Destruction of the Social Contract. Countries in North America and Europe have eviscerated their public function as the state has been turned over to the profiteers and civil society has been commodified by private foundations. This means that the avenues for social transformation in these parts of the world have been grotesquely hampered. Terrible social inequality is the result of the relative political weakness of the working class. It is this weakness that enables the billionaires to set policies that cause hunger rates to rise. Countries should not be judged by the words written in their Constitutions but by their annual budgets; the US, for example, spends almost a trillion dollars (if you add the estimated intelligence budget) on its war machine, while it spends a fraction of this on public good (such as on health care, something evident during the pandemic). The foreign policies of Western countries seem to be well lubricated by arms deals: the United Arab Emirates and Morocco agreed to recognise Israel on the condition that they purchase $23 billion and $1 billion worth of US-made weapons respectively. The rights of the Palestinians, the Sahrawi, and the Yemeni people did not factor into these deals. The use of illegal sanctions by the United States against thirty countries including Cuba, Iran, and Venezuela has become a normal part of life, even during this public health crisis being faced around the world due to the COVID-19 pandemic. It is a failure of the political system when the populations in the capitalist bloc are unable to force their governments – which are in many ways democratic
in name only – to take a global perspective regarding this emergency. Rising rates of hunger reveal that the struggle for survival is the horizon for billions of people on the planet (all this while China is able to eradicate absolute poverty and largely eliminate hunger).

Nuclear annihilation and extinction by climate catastrophe are twin threats to the planet. Meanwhile, for victims of the neoliberal assault that has plagued the past generation, the short-term problems of sustaining their mere existence displace fundamental questions about the fate of our children and grandchildren.
Global problems of this scale require global cooperation. Pressured by the Third World states in the 1960s, the major powers agreed to the Treaty on the Non-Proliferation of Nuclear Weapons (1968), although they rejected the deeply important Declaration on the Establishment of a New International Economic Order (1974). The balance of forces available to drive such a class agenda on the international stage is no longer there; political dynamics in the countries of the West, in particular, but also in the larger states of the developing world (such as Brazil, India, Indonesia, and South Africa), are necessary to change the character of the governments. A robust internationalism is necessary to pay adequate and immediate attention to the perils of extinction: extinction by nuclear war, by climate catastrophe, and by social collapse. The tasks ahead are daunting, and they cannot be deferred.

This note from Noam Chomsky and me comes as an appeal to unite and struggle against the forces of money, the military, and hypocritical moralism. This year, at Tricontinental: Institute for Social Research, we will focus attention on these perils, with special emphasis on the threat of war. After the United States atomic bomb attack on Hiroshima, Shinoe Shōda began to write tanka poetry in order to never forget the attack. Since the US Occupation censored work such as hers, Shōda had a Hiroshima prison guard mimeograph 150 copies of this book, which she then hand delivered to survivors of the blast. Amongst those poems is this short piece of brilliance:

Since
so many small skulls
are gathered here,
these large bones
must be the teacher's.
The human spirit rebels against extinction. It must now rebel not only to preserve life, but to improve life – both human life and the life of our planet.

Warmly,

Vijay

I am Tricontinental:
Luciana Balbuena. Communication Department.

Every day I wake up asking the same question: how can we communicate the research of the Institute? I sit in front of the computer and think of how to do this through plans and calendars. Faced with this challenge, we began to incorporate new formats to convey our work. In Buenos Aires, we began to develop our first podcast, Destapar la Crisis, or ‘Uncovering the Crisis’. I look forward to being able to go back to teaching classes and meeting with young people in schools. I miss laughing with and learning from them.
